Gate that fired

Band-count gate

Two bands inside $350\text{--}4000\text{ cm}^{-1}$; the extractor requires at least three.
Record dropped before structure resolution.

Wavenumber window

4100 cm^{-1} sits outside the $350\text{--}4000\text{ cm}^{-1}$ window — a scan-range artefact.
Record dropped; no curve digitisation is attempted.

Structure physics

Integrals sum to 20 H, above the formula limit of H + 2 for $\text{C}_6\text{H}_5\text{NO}_2$ (5H).
Listed in the diagnostic quarantine file; release files unchanged.
