

A

SDBS: ca. 54,100 digitised FT-IR absorbance spectra (AIST, 2015). NIST WebBook: ca. 17,000 gas-phase IR (approximate). Both are view-only web interfaces with no bulk export. NMRexp holds literature-mined *NMR* peak lists — the modality peer, not an IR competitor. **IR band lists (cm⁻¹ positions) are not absorbance traces**; absorbance-curve libraries remain the

C

IReXP — what this work adds

- + **Large** 121,233 experimental IR band lists mined from open literature
- + **Redistributable** 88,545 records in the CC-BY/CC0 pool; bulk download
- + **Traceable** source DOI plus a per-record licence pool for every row
